# DISPENSING

The Blue Light measuring tool

Blue Light & UV demonstration device. Place the lens in front of the Blue Spec device in any environment and the harmful blue light reduces in real time and is displayed as a percentage reduction. Animations also aid better patient understanding of the benefits of blue coated lenses. On the reverse side there is a UV measurement facility.

## ABOUT BIB

BIB Ophthalmic Instruments, established in 1999.

An independent UK based sales, marketing, distribution and service company, specialising in the supply of ophthalmic instruments to opticians and UK hospitals. We work very closely with our global manufacturing partners to ensure we offer cutting edge technology at highly competitive pricing.

We focus on innovations in ophthalmic technology from around the world and continually strive to recognise market trends and anticipate requirements to ensure we stay at the competitive forefront. We welcome new ideas, from conceptual to the finished products, from individuals to established companies. We also encourage R&D centres to work with us to use our experience and our understanding of customer needs to bring new ideas to market.

As well as working with world leading ophthalmic manufacturers on a distribution basis, we have developed our own OEM brand of instrumentation, Mitron, which is available for UK and export markets. Mitron products offer reliability and quality at entry level prices.

Customer satisfaction is key to our ongoing success! Not only do we provide the right products to you at the right price, once you purchase from of us we want your custom for life. Our sales are backed up by a highly skilled and experienced team of service engineers. From installation, to product training, relocation services, emergency call out, preventative maintenance, service contracts, extended warranties and more.

We look forward to working closely with you to ensure your success.

Tim Baker Group CEO
