Features & Benefits of New Heater System

Users' point of view

Easier to use – activates automatically upon removal from the sealed pouch to be inserted into the EyeGiene System Mask. No pressure activation or any other action is required.

Enhanced safety and comfort of use

It takes over one minute to reach the therapeutic temperature which means that the patient does not need to rush after opening the heaters to get them in the mask. They can relax and take their time.

The heater has soft, smooth cloth edges with no metal like materials.

Bigger size: Heat is generated over a surface area that is ~400% larger

Therapeutic heat production lasts longer
